Python For Web

Backend Programming

There is a portion of the application the user sees and then—in most cases—the largest part of the application remains unseen.

What all do we need to know?

**Do we need to configure
everything?**

NO

Python does it all.

How?

Python Web Frameworks

What is a WebFramework?

Web application frameworks, or simply "web frameworks", are the de facto way to build web-enabled applications. From simple blogs to complex AJAX-rich applications, every page on the web was created by writing code.

Most Used Python Web Frameworks

django

Flask Web Framework

<http://flask.pocoo.org/docs/1.0/quickstart/>

Flask is a micro web framework written in Python. It is classified as a micro framework because it does not require particular tools or libraries.

Hello World In Flask

```
from flask import Flask
app = Flask(__name__)

@app.route('/')
def hello_world():
    return 'Hello, World!'

if __name__ == "__main__":
    app.run(debug=True, port=8080)
```

Python For DataScience

DataScience 🤖?

At the core everything is data.

Python for Machine Learning and Research

Machine learning is a subset of artificial intelligence in the field of computer science that often uses statistical techniques **to give computers the ability to "learn" with data**, without being explicitly programmed.

Thing we can do with Machine Learning.

- Speech Recognition
- Medical Diagnosis
- Statistical Arbitrage
- Learning Associations
- Classification
- Prediction
- Extraction
